

Maximize Efficiency and Savings with the RFID Remote Reader Update Manager

Only for Ricoh

It's 2023 and security has never been this crucial. The traditional way to keep your company's information secure and your software running as it should, is to hire technicians to manually update each device on each location. Now imagine your company has hundreds of multifunction printers at multiple locations. Going the traditional route would not only be time consuming, but also pricey. We have created a more efficient and less costly way.

We're introducing the new inepro RFID Remote Reader Update Manager. Remote maintenance is the future. You can conveniently do any maintenance from anywhere, at any time. With the automated updates feature, you keep everything secure at all times. And it's so easy to use, you won't need any technical expertise.

*Save time and money while making security your number one priority for your company.
This is all just a few clicks away.*

Not convinced yet? Read on.

Say goodbye to manual updates with the RFID Remote Reader Update Manager.

Manual updates performed by costly technicians are outdated. Besides saving time and costs with using our RFID Remote Reader Update Manager, you also eliminate the risk of human errors and disruption of your workflows. Two benefits that are certainly not guaranteed when you opt for manual updates by technicians.

With the RFID remote reader, you can – the name says it already – remotely access each card reader to update and make changes to your device's settings, firmware, and software whenever you need from wherever you need. Our tool allows you to stay in and enjoy your cup of coffee – all while supporting your customers from behind your desk with just one click. Incredibly convenient.

And in case you're wondering: yes, it works with all inepro RFID readers.

Bulletproof your security with automated background updates.

When you're dealing with sensitive information, ensuring maximum security is critical for your organization. To achieve that, your RFID card readers always need to be up to date.

The RFID Remote Reader checks every 3 hours if there's an update available. If there is one, it will automatically upload the firmware to the card reader. If there's a different configuration available, it will download it. With the RFID Remote Reader Update Manager, you ensure that all your RFID readers at your company are automatically running the latest software.

In case there's a reason that makes you want to temporarily disable this automated background updates feature, that is certainly possible. You can enable it at any moment again, and it will go back to running the updates automatically.

The RFID Remote Reader Update Manager requires no technical expertise.

With its user-friendly interface and intuitive design, there's absolutely no need for specialized training nor technical expertise. Let this tool do the work for you so you keep your organization running smoothly and efficiently.

Nevertheless, at inepro, we understand that learning a new tool or software can be overwhelming or confusing at times. That's why we have designed our onboarding process to be as user-friendly and supportive as possible. When you request to download the RFID Remote Reader Update Manager, you will receive a manual that outlines all the features and functionalities of the tool. We have created this manual to be easy to understand, with step-by-step instructions that will guide you through the process.

But we don't stop there. If you ever need further assistance, we offer live sessions to help you out with any questions you may have. We are committed to making sure that you feel comfortable and confident using our tool, and we'll be with you every step of the way.

Remote maintenance is the future. Join us today.
